                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to the genomic sequence of Pyrococcus abyssi and P. abyssi proteins (see AAB96053-AAB96842). P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is a fragment of the genomic sequence of P. abyssi. The 5' end of this sequence overlaps with the 3' end of AAH41225 and the 3' end of this sequence overlaps with the 5' end of AAH41277. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to 110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 349980 BP; 98084 A; 80447 C; 77665 G; 93784 T; 0 other:

These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    which encode human secreted proteins AAB75280 - AAB75287. Included in the convention are protein sequences AAB75288 - AAB75287. Included in the convention are protein sequences AAB75288 - AAB75241 which are fragments of the secreted proteins and amino acid sequences with which these conventions and the activities of the activities of the proteins and the activities of the proteins and the proteins and the activities of the activities of the proteins and conventions are polynucleotides and the activities of the proteins and antisponists in their agonists and antisponists may be useful for treating preventing and diagnosing diseases and disorders such as autoimmune diseases e.g. rheumatoid arrthritis, hyperproliferative disorders c.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, c.g. antisponists and fungi and cular disorders c.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, c.g. antisponists and fungi and cular disorders c.g. cerebral ischaemia, c.g. corneal infection. The polypeptides can also be used to ald wound c.g. corneal infection. The polypeptides can also be used to ald wound e.g. corneal infection. The polypeptides can also be used to ald wound c.g. culture of primary tissues, to regenerate tissues and in chemotaxis. The c.g. culture of primary tissues, to regenerate tissues and in chemotaxis. The c.g. culture of cornease storage capabilities. Included in the invention are oligonucleotides AAF63780 - AAF63780 and peptide AAB75239 which are used in the identification and characterisation of the DNA and protein
                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                           Qy

cype IIIa membrane protein and is expressed predominantly in prostate cells in normal human tissues. Structurally, STRAP-1 is thought to be a cid protein characterised by six transmembrane domains and in protein characterised by six transmembrane domains and comminantly in prostate carid protein characterised by six transmembrane domains and comminantly in protein in comminantly in protein in comminantly in comminantly in protein in comminantly comminantly in comminantly comminantly in comminant comminantly in comminant comminantly in comminant comminantly in comminant comminant comminantly in comminant comminantly in comminant comminant comminantly in comminant comminant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents cDNA encoding a novel human protein, STRAP-1 (serpentine transmembrane antigen of the prostate). STRAP-1 is the prototype member of the STRAP family of proteins (AAY58194-Y58197) which exhibit a high degree of structural conservation, but which show no significant structural homology to known human proteins. The STRAP-1 gene has been localised to chromosome 7p22. STRAP-1 is thought to be a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 4; Fig 1A; 83pp; English.

    Result
No.
                                                     pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following assembly was confirmed by restriction digest. The following in the feature table with their source databases: Em., EMBL; Sw:, in the feature table with their source databases:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Local

on Nov 16, 2001 this sequence version replaced gi:16944088.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP

It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             be preserved.

It currently consists of 35 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                     Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynuclectide kinase. Adaptor oligonucleotides were adaptored DNA was purified and size-selected for a 9.5 to electrophoresis. Vector DNA was prepared from a derivative of pWD42 (91|4733114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for amplicillin resistance."
